Think ahead. Bend better
Attention to every detail

Innovative ideas drive forward bending – and therefore your company, too. Modern bending machines from TRUMPF impress with functions that save resources, make operation easier and ensure precise quality – from the very first part. Whether it’s laser-measured angles, energy-saving hydraulics or fully automatic tool changes – find out more about how you can make your bending production even more successful on the following pages.

Appropriate:
- Choose from the largest range on the market

Modern:
- Digital functions provide precise results

Simple:
- Fun operation that is easy to learn

You can’t bend the facts

Bending sheet metal with 1,000 tons of press force precisely to 0.3°? TruBend machines make it possible. This page shows fascinating facts and illustrates what you can bend under optimum conditions.

30% weight savings with lightweight bending tools

TRUMPF has delivered over 540 km of bending tools to date

You can bend 1,000 t of large and thick parts powerfully

0.3° Positioning precisely to 0.002 mm can be bent

2,500 mm/s backgauge for fast station operation
TruBend Applications

Be better prepared for bending

Programming is essential when it comes to bending. Programs such as TecZone Bend simulate the bends in 3D and automatically check feasibility. This decreases the mental effort you need to put in, saves time and avoids rejects.

Change tools more quickly

Setup is a part of bending. It is faster and easier with the automatic tool changer, tools with a lightweight design, and automatically prepared and optimized setup plans.

Produce precisely

It all depends on the angles. Whether you bend manually or automatically – intelligent functions ensure precision and productivity in your production.
Innovations for your success

You want to know what’s in it for you before you invest. On the following pages you can find the most important functions of the TruBend family sorted according to the benefits: part variety, quality, productivity, ergonomics, programming and tools.
Producing the complete spectrum of products

Whether you are bending delicate or oversized parts: use the widest machine range on the market to meet your various requirements – simply and without compromise.

Any component geometry

Regardless of whether it’s thick, thin, large or small parts – with bending machines from TRUMPF you can produce an enormous part variety. Due to the large range of TruBend machine variants, you can process any component geometry cost-efficiently and in top quality. You benefit from:

- various tonnages and bending lengths
- a large material range from aluminum to Hardox
- precise positioning of your parts with 2-, 3-, 4-, 5- or 6-axis backgauge systems

Any part size

If you normally bend large parts, the option increased open height might be of interest for you. In contrast, the TruBend Series 7000 and the automatic TruBend Cell Series 7000 are specialized for small parts. Bend with flexibility:

- With a press force of up to 1,000 metric tons
- Parts of up to 8 m in length
- Box heights of up to approx. 518 mm

Depending on the machine, you can bend box heights of up to 518 mm. Precisely realize even complex parts with many bends.
Through thick and thin
Does the sheet thickness vary from batch to batch? No problem – the Thickness Controlled Bending (TCB) function automatically compensates for variations. Sensors detect the actual thickness of each sheet and adjust the pressing depth of the upper tool accordingly. This means that you can achieve precise angles regardless of the sheet thickness – without loss of productivity, calibration and programming effort.
Precise angles from the very first part

Perfect angles are what really counts when it comes to part quality during bending. If they are right from the very first part, you prevent rejects and don’t waste material or time. You have to be able to rely on your parts being identical in series production – you don’t want to have to measure every angle again at the end. This isn’t necessary with a TruBend machine, because it offers you valuable additional benefits.

Precise angles right away

Numerous factors influence angle precision when bending, for example fluctuating strengths in the material or springback. The solution: automatic angle measuring systems from TRUMPF – they enable you to bend perfectly from the very first part in a series. ACB stands for “Automatically Controlled Bending.” The ACB systems’ sensors record the actual angle and springback and control the press beam so that the desired angle is bent – quickly and precisely. The two ACB Laser and ACB Wireless systems complement one another; one system may be more appropriate than the other depending on the application.

Tactile process: ACB Wireless
The user-friendly system measures and corrects angles using two sensor disks that are integrated into the upper tool. These sensor disks come into contact with the inner surface of your bending part during bending. In doing so, together with sensors, they measure the precise angle electronically and ensure that it is perfect. The control and the angle measuring system communicate wireless here.

Optical process: ACB Laser
Without any setup required – with ACB Laser you can use a non-contact, optical system for angle measurement. This means that two measuring units move in front of and behind the bending line independently of one another. Each unit consists of a laser and a camera. The laser projects a line onto the sheet metal; the camera detects this line and calculates the angle of the bending part in real time.
The benefits for you – quality

Strengths of ACB Wireless
- Particularly suitable for:
  - Short flanges
  - Reflecting surfaces
  - Interior tabs
- Quick station bending
- Quick multi-point measurement

Strengths of ACB Laser
- Particularly suitable for:
  - Acute and obtuse angles
  - Thick sheet metal
  - Large radii
- No set-up required
- System is suitable for all tools
- Use of special tools possible
- Low interference contour
- Completely mark-free
- Quick multi-point measurement

- High speed
- Perfect angles
- Various bending methods possible
Reducing setup times all round

From machine functions and tools to the software components – reduce your setup times to a minimum. You can achieve this with the aid of our unique overall concept. Read more about some of its components on this spread.
The benefits for you – productivity

**Lightweight bending tools:**
30% less weight

With the Safety-Click safety mechanism you can change the upper tools from TRUMPF quickly and safely. The operator simply clamps the tool into and out of the machine clamp from below. Patented lightweight bending tools from TRUMPF weigh around 30% less than conventional upper tools but are just as durable and resilient. This means that the operator doesn’t have to lift such heavy loads and can set up more quickly.

**BendGuard:**
Automatically safe

Due to the BendGuard, you no longer have to adjust any safety devices manually on your bending machine. For the CNC-controlled variant, the BendGuard moves independently to the height of the set-up tools. This means that you avoid errors and save manual interventions and setup time.

**Tool Indicator:**
Position precisely

Due to the LED bar in the upper tool clamp, you can set up in no time – it shows you exactly where the tool stations have to be set up. It also visualizes which tool station the next bend is to be carried out on.

**ToolShuttle:**
Change tools simply

Manual setup made easy? This can be achieved with the ToolShuttle. You can ergonomically move the tools from the tool magazine to the setup position via a moving table – this makes handling easier, particularly of large and heavy tools. Your tools are also secure in the ToolShuttle – the closed storage prevents corrosion or dirt, the tools do not slide about, and searching time is also reduced.

**ToolMaster:**
Change tools automatically

The ToolMaster automatically sets up your bending machine for every new program. An invaluable benefit, especially in case of small lot sizes, as you save time and effort. Find out more about the functions and benefits of the ToolMaster on pages 36 and 37.

**Tool Setup Optimizer:**
Optimizing the setup process

You can save even more time now thanks to the Tool Setup Optimizer: While TecZone Bend is swiftly generating the bending programs for your bending parts, the Tool Setup Optimizer then checks which parts can be bent using the same tools and which tool stations can be best combined in which manner – and all in just a few seconds. This means that you change the setup of as few tools as possible, saving time and energy – and you can get on with bending more quickly.

The ToolShuttle allows you to set up heavy tools quickly and simply.

During set up the Tool Indicator shows precisely where the bending tools have to be used.
Bending is team work

The team made up of human and machine is critical to success during bending. If the operator is at ease, the machine can deliver its full potential. A bending machine from TRUMPF therefore does everything it can to make the operator’s work easier. From the quiet drive to the optimal illumination and customizable screen to smart highlights: Simple operation and ergonomic design ensure more fun when bending and more physical relief for the bending specialist. A few examples:
The benefits for you – ergonomics

MobileControl: For less time spent moving about

The smart helpers MobileControl and MobileControl Pro ensure that you spend less time moving around. As movable operating units in a rail on the press beam, they include the most important functions, meaning that you can change the machine parameters in an instant – without constantly having to go to the control panel.

Bending aid: Lift sheet metal easily

Over time, bending large and heavy parts has a negative impact on the health of even the strongest operators. The bending aid from TRUMPF prevents the problem before it starts. It aids bending of weights of up to 300 kg, relieves the operator in the case of angles of up to 30°, and can be automatically adjusted in height.

Part Indicator: For minimal rejects

The Part Indicator shows to the operator on the screen how they should position the bending part. The next insertion position is then always shown. A colored marking indicates whether the part has been placed correctly. This reduces rejects, particularly in the case of inexperienced operators.

Wireless foot switch: For safe operation

Safety is important for ensuring that every operator can work optimally. The TÜV-tested wireless foot switch provides increased freedom of movement and eliminates the tripping hazard.
Intuitive operation and programming

With TRUMPF, benefit from the enormous potential for time savings when controlling and programming your bending machine. Touchpoint Bend combines the advantages of state-of-the-art multi-touch technology and industrial control. This makes operating your bending machine as simple and intuitive as using a tablet or smartphone. Programming 25 parts in 18 seconds? TecZone Bend makes it possible. Benefit from the quickest and simplest bending programming currently on the market.

A dialog between operator and machine

**Touchpoint Bend** is the simple interface for operating your bending machine. Navigation follows an intuitive logic. The displays are reduced to their essentials; realistic 3D visualizations with collision check make processing easier. The right solution is therefore achieved for each application – from simple to complex components. The integrated aid also makes machine operating easier; it can be called up using two-finger operation and simple touch gestures such as swiping.

**TecZone Bend** is the quickest and simplest programming system for manual and automated bending machines and a great help for any operator. This means that you can carry out programming either at the machine or offline in the office and can switch seamlessly between these two aspects. The TRUMPF software automatically generates program proposals, including NC programs, based on 2D and 3D data. It calculates your bending programs in seconds – including collision check in real time, dismantling assemblies, managing setup plans, and much more. Prioritization of tools reduces work outlay and increases the productive operating time of your machine. The optional Tool Setup Optimizer greatly improves the setup process.
Access the right program automatically

Access the right bending program in an instant with the 2D code scanner. The scanner, which is connected to the machine, reads a bar code or Data Matrix Code from paper and automatically loads the program. This saves you entry and search outlay.
The right tool for any eventuality

Your bending machine provides top performance every day. All components have to interact to ensure this. This is why we don’t just provide detailed advice, but also produce all tools ourselves – durable, precise and perfectly coordinated to your TruBend machine. Choose from the widest range of tools on the market. Our specialists also develop special tools to suit any requirement.

Durable with built-in added value
Wear-resistant working areas make your tools particularly durable. This is why laser beams harden them precisely where it matters – on the surface. The interior remains elastic to ensure that the tool does not splinter during overload. High-quality coatings such as LASERdur AL and LASERdur ZN prevent unwanted adhesion of aluminum or zinc due to abrasion of the sheet metal. This means that there are outstanding glide characteristics and no marks or imprecision. Your tools are also corrosion-resistant and do not have to be cleaned.

Bend without leaving any trace
When bending visible parts it is particularly important that you do not leave any marks on the sheet metal. You can achieve this with the RollBend tool. It enables you to create small flange lengths, as well as moldings and holes close to the bending line, without causing deformation. You can easily combine it with standard dies.
For perfect interplay with your machine, we produce all bending tools ourselves. You can obtain more than 150 upper and lower tools ex stock – as a set or individual parts. We develop, test and produce special tools in accordance with your specifications for particular requirements.

You can find more information about TRUMPF bending tools at [www.trumpf.com/s/hup25d](http://www.trumpf.com/s/hup25d)
To ensure you bend correctly

Whether you are a specialist for small or large parts, want to bend productively as an all-rounder or rely on fully automatic bending cells – you have the choice. On the following pages, you can find bending machines with intelligent functions for every requirement – to ensure you’re always on the right track when it comes to bending.
Find more information on TruBend machines at www.trumpf.com/trupas3.5d
TruBend Series 1000

The efficient basic machine impresses with its simple operability, high precision, and the familiar TRUMPF safety standards. Fast set-up as well as simple and smooth operation with minimal downtimes offer you the perfect introduction to the TRUMPF bending world.

01 Intuitive operation
get started right away

02 Precise bending
even for complex parts

03 High machine availability
with the TRUMPF ECO system

04 Fast set-up
for smooth operation
01

**Intuitive operation**
get started right away

The TruBend Series 1000 is fitted with a control system developed in-house and enables quick and easy numerical and graphical programming.

The TRUMPF control system makes programming easy.

02

**Precise bending**
even for complex parts

The 4-axis backgauge ensures the correct positioning of the sheet and enables you to bend even complex parts with high repeatability without any problems.

The 4-axis backgauge enables you to bend complex parts.

03

**High machine availability**
with the TRUMPF ECO system

Embedded in the TRUMPF ECO system, the BendGuard ensures reliable bending. The globally available TRUMPF Remote Services ensure fast customer service and high machine availability.

04

**Fast set-up**
for smooth operation

The TRUMPF hydraulic upper tool clamp simplifies tool changes. This means you can now set up faster and easier than ever before.

More information on the impressive functions of the TruBend Series 1000:

- BendGuard (page 13)
- TecZone Bend shop floor programming and offline programming (page 16)

This machine is only available in selected countries. Please contact our sales team for more information.

Get more information about the TruBend Series 1000 at www.trumpf.info/subr82
TruBend
Series 3000

The cost-efficient standard machine – combines top TRUMPF quality with simple operation and an attractive price-performance ratio.

01

Easy to operate
and program

02

Compact design
for symmetrical transmission of forces

03

Flexible setup
using the system

04

Precise angles
measured by laser
**Easy to operate**
and program

You can also produce cost-efficiently with low capacity utilization with the machines from the TruBend Series 3000. Furthermore, you benefit from top safety standards. You can carry out graphical programming directly at the controls by quickly inputting externally created 2D DXF drawings. Tool data in DXF format can be imported quickly. TecZone Bend, the quick and easy programming system, is also available as an offline version.

---

**Compact design**
for symmetrical transmission of forces

The compact architecture with hydraulic drive ensures a symmetrical transmission of forces. The entire bending length can be used without limitations here. The crowning facility guarantees uniform, precise angles, even with large bending lengths. That and their 4-cylinder technology make the machines of the TruBend Series 3000 the fastest bending machines of their class.

---

**Flexible setup**
using the system

The tool handling is thoroughly well thought-out – self-centering tools reduce setup times; wear-resistant tool clamps ensure quality in the long run. You can set up upper tools of up to 13.5 kg from below quickly with the aid of Safety-Click. You can also insert tools so they are rotated in the mounting.

---

**Precise angles**
measured by laser

The TruBend Series 3000 is the only machine in its class with which you receive the ACB Laser angle measuring system. The laser and camera automatically check whether all angles are correct during the bending operation. The non-tool-based measurement system means no marks, no setup outlay and top part quality without rejects.

---

More information about the impressive functions of the TruBend Series 3000:

- System for perfect angles (page 10/11)
- TecZone Bend offline programming (page 16)
- 2D code scanner (page 17)
TruBend Series 5000

The productive all-round machine – with its high number of benefits and functions during programming, setup and operation, you achieve unrivalled productivity during production.

01
The productive multi-purpose machine
precise and flexible

02
Turbo
for your programming

03
Efficient and economical
energy on demand

04
Easy to operate
with handy extras
The productive multi-purpose machine
precise and flexible

Everything it does, it does quickly and precisely – among other things, sophisticated angle measuring systems such as ACB Wireless and ACB Laser ensure precise angles from the very first part – regardless of the material properties. It is user-friendly, saves rejects and increases your productivity, as it reduces outlay for running in. Choose the right solution for every application – the two independent angle measuring systems can be combined with one another.

Precise angles due to laser measurement – ACB Laser.

Turbo
for your programming

Your machine grows with you – with the ToolMaster tool changer you can set up automatically. You can also upgrade it to the automated bending cell TruBend Cell 5000. Minimize the number of tool changes using the Tool Setup Optimizer option. This not only saves time and effort – most importantly, it also allows you to bend more productively and efficiently.

The ToolMaster now includes even more tools.

Efficient and economical
energy on demand

The third generation of the TruBend Series 5000 makes the operator’s daily work easier due to a variety of innovations. This includes comfortable and ergonomic control via wireless foot switch or MagicShoe, which you can use to trigger the stroke directly. With the MobileControl system, you can save walking time, which is a great advantage when it comes to a 4-m-long machine. The On-Demand Servo Drive thus saves up to 72% in energy compared to traditional hydraulics.

Easy to operate
with handy extras

The handy bending aid for angles of up to 30°, including automatic height adjustment, provides valuable assistance. In particular, it helps when bending heavy or large parts. You can choose between either plastic, brushes or rollers as support. The Part Indicator positioning aid makes correctly inserting the component into the machine easier – safety is increased for the operator and you reduce rejects.

More information on the impressive functions of the TruBend Series 5000:

- Thickness Controlled Bending (page 9)
- System for perfect angles (page 10/11)

TruBend Series 7000

The ergonomic high-speed machine – it bends small and medium-sized parts under top work conditions in a space-saving and highly productive manner.

01 High output with top quality
due to direct drive and angle measuring systems

02 Quick and safe
due to BendGuard Automatic

03 Well thought-out space-saver
suitable for every production

04 Comfortable operation
due to consistent ergonomics
High output with top quality
due to direct drive and angle measuring systems

Energy-saving and highly productive – the directly driven torque motor produces a high torque even at a low revolution speed. This means that you can use large press forces at the same high working speed. The mass-reduced backgauge also ensures a high level of drive dynamics. You create the ideal conditions for maximum productivity along with the angle measurement systems.

Its backgauge makes the machine particularly dynamic, and ACB Laser particularly process-safe.

Quick and safe
due to BendGuard Automatic

Two manual interventions fewer – manual adjustment of the safety device is now a thing of the past due to the BendGuard Automatic. With the help of the CNC control, the BendGuard moves independently to the height of the set-up tools. You save the usual manual interventions and valuable setup time, and can work safely and error free.

Automatic safety with the BendGuard Automatic.

Well thought-out space-saver
suitable for every production

Small and compact – with its low installation area, the TruBend Series 7000 is suitable for every production and can be transported by a forklift truck. When bending small and extremely small parts, the machine is a big help – due to the geometry of the gauge finger, you can also position parts with very small flanges with ease and collision-free. You can conveniently remove small parts directly after bending with the aid of a box.

Comfortable operation
due to consistent ergonomics

If things are good for the bending operator, things are good for the bending process – the TruBend Series 7000 is the first press brake to receive an ergonomics certificate. The operator works ergonomically with a sitting and standing aid; they can adjust the support table individually. The sitting and standing aid as well as the swiveling control are easy on the spine. LED lighting ensures top visibility in the work area. A laser that projects the line to be bent onto the sheet metal part provides intelligent assistance.

More information on the impressive functions of the TruBend Series 7000:

- System for perfect angles (page 10/11)
- BendGuard (page 13)
- Touchpoint Bend (pages 16)
- TecZone Bend shop floor programming and offline programming (page 16)
- 2D code scanner (page 17)
TruBend Series 8000

The flexible large-format machine – with up to 1,000 t of press force, it bends small, large, or extra-large parts powerfully and precisely.

01 Bending complex parts
even with extremely large sizes

02 Simple setup
even with heavy tools

03 Quick installation
due to surface-mounted design

04 Powerful bending
with an especially high press force
01 Bending complex parts

Bending complex parts even with extremely large sizes

The TruBend Series 8000 processes large and oversize formats in a versatile manner and extremely precisely, for example due to the LCB (Laser Controlled Bending, similar to ACB Laser) laser-based angle measuring system version. With a particularly large usable open height and throat depth, 8 m of bending length, and up to 1,000 metric tons of press force, even high-tensile materials and long flanges are no problem. You can bend smaller workpieces on multiple tool stations; the machine can even achieve Z bends perfectly – a true all-rounder.

02 Simple setup

Simple setup even with heavy tools

Large bending parts require large tools. Despite this, the TruBend Series 8000 can be set up quickly and easily due to the ToolShuttle – the operator moves the tools from the tool magazine directly into the machine ergonomically and safely. The ToolShuttle has over 160 m of load capacity and stores your tools so that they are well protected.

03 Quick installation

Quick installation due to surface-mounted design

Surface-mounted versions of up to 6 m save you from needing expensive foundations. This therefore doesn’t just reduce the investment required, you can also position the machine independently and move it around. If you eventually resell the machine, you will benefit from stable prices in the second-hand market, as your buyer does not have to provide foundations.

04 Powerful bending

Powerful bending with an especially high press force

However, the crowning facility and tool clamp of the TruBend Series 8000 are extremely sturdy with capacities of up to 6,000 kN per meter. The automatic crowing facility provides high productivity and precise angles over the entire bending length. Alternatively, adjust the crowning curve point by point every 250 mm. A further advantage: like all bending machines from TRUMPF, the TruBend Series 8000 also has no unnecessary interference contours and thus makes parts handling easier.

More information on the impressive functions of the TruBend Series 8000:

- System for perfect angles (page 10/11)
- ToolShuttle (page 13)
- TecZone Bend offline programming (page 16)
- 2D code scanner (page 17)

Find more information about the TruBend Series 8000 at www.trumpf.com/s/7e30pl
Tandem version of the TruBend Series 8000

Operate two perfectly attuned machines individually or together as one machine – for double the press force and double the bending length.

Large format in duplicate – for any situation
Do you bend both 6 m or 8 m long parts as well as short sheets? Then you need a flexible solution – the tandem version of the TruBend Series 8000. Two machines act synchronously and thus double the bending length and press force here. You can achieve longer flange lengths due to a large throat depth and can increase your part variety. You can also use each machine individually, meaning that you have two machines available for short parts. The result: more capacity, more productivity, more orders processed.

Easy to operate over 8 m too
You can even save money during installation due to the surface-mounted installation. Clever helpers such as MobileControl, the multi-touch control or the bending aids are also there to support you in the tandem design – they make working over long distances easier and allow you to produce extremely professionally.

Productive and reliable over the whole length
You can carry out two different bending operations with one tool using the lower tool displacement, even in tandem mode. This increases your part variety and saves setup time and investment costs. The BendGuard ensures safe working across the entire tandem bending length.
When is your tandem day?

A tandem facility is worthwhile even if you only occasionally bend oversized parts. Simply use the machine as a tandem facility on certain days; the two machines can produce independently of one another during the rest of the week.

Special machines

Do you have very special requirements when it comes to bending length, press force, backgauge, open height or tool system? Due to decades of experience in building customized bending machines, we will, of course, help you in developing special machines.
Automatically successful

You produce particularly cost-efficiently with an automatic bending cell – around the clock if required. You reduce your cycle times and bend with minimal personnel effort. The continuously high quality of your components saves reworking and rejects. When do you start bending successfully automatically?

1. The right machine
Your TRUMPF bending cell suits you – choose the right machine type and the right machine size depending on the range of components.

2. Automatic setup
Automatically set up your bending machine for each new program with the ToolMaster tool changer. An invaluable advantage, even in case of small lot sizes. You save time and effort.
Why TruBend Cell?
To ensure that your processes run reliably and productively, we develop comprehensive solutions made up of bending machines, bending tools and automation. This also includes software, sensor systems, material flow and state-of-the-art gripping technology.

Keep a tight grip on your production
The BendMaster carries out gripping and moving during automatic bending. With its vacuum gripping technology, it reliably handles components of up to 100 kg in weight and up to 4 m in length. The nimble pivoted-jaw gripper moves the small components. It skillfully removes small parts at the sheet removal station and provides them parallel to production. Depending on what you need and on which machine you carry out production, we recommend the pivoted-jaw and vacuum gripper technology.

Reliable due to sensors
Sensors ensure reliable material handling. This ensures consistent quality. The sheet sensor identifies blanks that are not centered – due to it, the gripper is able to pick up the blank in the correct position. Weight sensors ensure that only individual sheets are always lifted. The sensor system in the backgauge fingers ensures quick and precise positioning of your parts.

3. Produce automatically
Process a wide range of components with low part costs and high reliability standards. The universal offline programming saves time – create programs parallel to production at the workstation.

4. Customize completely
We also provide customized options when it comes to system technology and robotics. Do you require multiple robots or want to connect handling equipment? Are you looking for a solution for unusual circumstances? Simply contact us; we will be happy to advise you.

Find more information about automation for bending machines at www.trumpf.com/s/uda429
ToolMaster

Make searching for and moving tools a thing of the past: the tool changer sets up your bending machine for the next task automatically – the new generation is faster than ever. This doesn’t just save time and effort, it also particularly increases your productivity.

Change tools automatically
Retooling a bending machine during each program change is laborious. The ToolMaster carries out these setup operations for you. It can now do even more – you are able to load it parallel to production through a door; it uses standard tools, ACB tools, tools with adapters and has space for up to 60 m of tools on average – depending on the tool, even more is possible.

You can carry out other tasks while the ToolMaster automatically sets up your tools. This really pays off, particularly when it comes to small lot sizes. Searching and walking times are eliminated completely. Its positioning accuracy makes station operation easier for you. A further benefit – the closed storage protects your tools from dirt and corrosion.
Depending on the component, upper tools have to be set up so they are rotated.

The ToolMaster uses standard tools; you can also use ACB and specialist tools, as well as tools with an adapter.

Due to the integrated parking position for the bending aid or support brackets, you can use the space in front of the bending machine optimally depending on the component.

Find more information about the ToolMaster at www.trumpf.com/s/0Bwite
TruBend Cell 5000

Productive universal bending cell: the ideal solution for anyone who values productive and flexible automation for the widest possible range of parts. Quality remains consistently high.

01
Produce reliably with in-built intelligence

02
Perfect programming simple and fast

03
Easy regripping due to automatic gripper change

04
Shape the material flow with the appropriate installation version
Produce reliably
with in-built intelligence

The big advantage with automatic bending – you can produce reliably and with consistent quality around the clock. This is ensured by a range of factors. The sensor system in the 4-axis or 6-axis backgauge positions your components with precision down to the millimeter. The angle measurement systems ACB Laser and ACB Wireless ensure good parts from the very first part.

Perfect programming
simple and fast

The programming software TecZone Bend is exciting: You can use it to generate bending programs within the shortest time. Based on 2D and 3D data, TecZone Bend provides the entire programming recommendation, including the NC code. You can intervene at any time and, for example, redefine the picking-up process for the sheet even further or adapt the unstacking strategy. Replace conveyor belts, output pallets or redefine stack heights with just one click.

Easy regripping
due to automatic gripper change

The right gripper is always used – this is how your TruBend Cell 5000 processes the widest range of orders easily in succession. Depending on the component size, you can combine different gripping technologies for this purpose. You save plenty of time during small part production – blanks are separated parallel to production and transferred over to the pivot-ed-jaw gripper. You can produce up to four component types in one operation using the rotating sheet removal station, including regripping consoles.

Shape material flow
with the right installation version

Want maximum freedom? You can shape the material flow of your TruBend Cell 5000 according to your requirements using conveyor belts and pallet conveyors. A conveyor belt for removal of small, non-stackable parts also increases your productivity. Without interrupting the bending operation, the pallet conveyor loads blanks or unloads finished workpieces. If required, you can also connect your bending cell to a store.
**Keep a tight grip on your production**
Do you need speed and maximum productivity? Should your TruBend Cell 5000 also reliably handle large and heavy parts? In both cases, the grippers with flexible use assist you at the bending cell with precision. This means that the pivoted-jaw gripper with its additional axes works highly productively. Its regripping outlay is minimal. It even holds parts that the suction cup cannot grab effortlessly. In contrast, the suction cup gripper can deal with any dimensions and reliably processes even very large and heavy parts. You can even design and produce suction cup grippers yourself cheaply.
Go with the flow
How long should your floor lane be? Where would you like to have how many pallet spaces? A bending cell can be tailored precisely to your components and your production volume. This page shows some installation versions.

Did you know?
Your TruBend Series 5000 machine can be upgraded to an automatic bending cell at a later date.
TruBend Cell 7000

The innovative high-speed bending cell – you can bend small parts dynamically and extremely cost-efficiently with the quickest system in the world.

01 Minimal costs per bend

02 More productive due to clever gripper

03 Compact minimal space required

04 Well thought out optimum material flow
Minimal costs
per bend

The part throughput of a TruBend Cell 7000 is twice as high as in a conventional bending cell. Quick individual components and harmonious processes make the bending cell dynamic. From the divided tool clamp and tool changer to offline programming – the interplay of innovative functions enables cycle times of just four to six seconds per bend. This allows you to bend with unparalleled low part costs.

More productive
due to clever gripper

The tool clamp of the TruBend Cell 7000 is divided so that the robot arm of the BendMaster can grip directly through it. This minimizes regripping outlay and allows your cell to work even more quickly and productively. The pivoted-jaw gripper is available in multiple versions; which one is most suitable for you depends on your applications.

Compact
minimal space required

With an installation area of just 5.5 by 3.9 m, the TruBend Cell 7000 fits in any production. In addition to the space-saving installation, operation has also been thought out to the smallest detail. You can therefore load and unload your bending cell easily from the same side. Use precisely the installation variant within the small cell that suits your requirements.

Well thought out
optimum material flow

Two synchronized robots load your machine at the same time – the ToolMaster sets up automatically and the LoadMaster Bend loads quickly, reliably and parallel to production. With the aid of a connector system, the system pallets provide up to 24 different components here. Finished parts are placed in boxes with different sections or discharged onto the pallet conveyor. The gentle conveyor belt is suitable for scratch-prone parts. The storage capacity is large enough that you can produce entirely without an operator over a long period of time.
**Optimum processes**

Automatic helpers ensure a smooth material flow around your bending cell. The ToolMaster sets it up automatically with the appropriate tools. The sensor system identifies the tool type and its position. This means that you can arrange the bending tools in the ToolMaster in any manner. It pays off especially with small lot sizes – your machine processes different orders without you having to deploy staff. The LoadMaster doesn’t just load your system with blanks parallel to production. An integrated sheet sensor also measures the blanks optically and transfers them to the BendMaster in exactly the right position. Finished parts land on a conveyor system; from there they are either transferred into boxes or are discharged via the pallet conveyor. You can produce without an operator over a long period of time due to the large storage capacity. The TruBend Cell 7000 is also space-saving and can be loaded and unloaded from the same side.
Arranged according to your requirements

Whether you want to have your finished parts sorted into boxes or discharged via a gentle conveyor belt – all components of your TruBend Cell 7000 can be put together perfectly in accordance with your requirements. This page shows possible versions as examples.

TruBend Cell 7000 with BendMaster (15) and LoadMaster.

TruBend Cell 7000 with BendMaster (15), LoadMaster, ToolMaster and conveyor belt.

TruBend Cell 7000 with BendMaster (15), LoadMaster, ToolMaster and conveyor system.
Technical data

Spotlight: Panel bending

In addition to die bending, TRUMPF provides another technology – panel bending. This allows you to achieve multidimensional workpieces with minimum flange lengths, high boxes, small profiles, formed sections, recesses, diverse radii and multiple negative bends quickly and with flexibility.

Whether semi-automatic or fully automatic: With the TruBend Center 5030, TruBend Center 7020 and TruBend Center 7030 panel benders, you can discover the widest range of parts on the market. You can therefore also create particularly complex components in addition to the traditional panel bending range. From delicate cases to large tanks, components for the widest range of industry branches and applications are created.
TruServices.
Your Partner in Performance

To ensure your future success, you need services that definitely put you ahead of the pack for the long term. Whether that means creating the best conditions for successful production, or using your TRUMPF bending machine perfectly to adapt to changes with flexibility – together we’ll find ways to sustainably maximize your value creation. As a reliable partner, we will provide you with comprehensive solutions and service packages for your requirements – so that you can produce cost-efficiently and at a constantly high level.

EMPOWER
When you would like to create optimal conditions for production success: We will help you with that. If you are well trained, you can fully utilize the potential of your lasers, laser systems, machines and software, and secure key competitive advantages. In the laser cutting technology course, for example, you learn how to obtain the best possible cutting quality and determine piercing parameters for special materials.

SUPPORT
If flexibility and system availability in ongoing operation are a must for you, we are there for you. Whether it’s a technical problem, software, a spare part or a question concerning maintenance: with the Service app and your free MyTRUMPF account, you can send your service messages quickly and easily to our Technical Service team at any time.

IMPROVE
If you want to gradually focus your production on maximum value creation, Together we will achieve your goal. Where system maintenance and servicing are concerned, you will benefit from expert support of the highest quality. Ensure constant maximum machine availability, consistently high production quality, and low operating costs with service agreements from TRUMPF.
Passion is what drives us

Whether it’s production and manufacturing technology, laser technology, or material processing – we develop highly innovative products and services for you which are tailored to your industry and which are absolutely proven and reliable. We put everything we’ve got into giving you a compelling, competitive edge: expertise, experience, and above all passion.

Machines & systems
Laser cutting, punching, bending, laser welding: With custom-fit machine tools, laser systems and automation from TRUMPF, you can master flexible sheet metal and tube processing. Not forgetting our solutions for additive manufacturing.

Lasers
Whether you are cutting, welding, marking or processing surfaces, lasers from TRUMPF are the universal tools for industrial applications – in the macro, micro and nano ranges. In addition, you will get software solutions and benefit from application knowledge and consulting.

VCSEL solutions & photodiodes
Laser and photodiodes from TRUMPF Photonic Components come into their own in numerous applications: in both the industrial and consumer markets and even in optical data communication. In the TruHeat VCSEL systems, millions of VCSELs (Vertical Cavity Surface Emitting Laser) generate infrared heat, which is used for laser heat treatment.

Power electronics
Nothing’s hi-tech without a process power supply: With generators for plasma technology, industrial heating, battery inverter systems or microwave amplifiers, you get power at the frequency and performance you need.

Solutions for your future
Take advantage of digital networking opportunities: we partner with you on the path to networked production, delivering pragmatic, economical solutions that make your processes both more transparent and flexible.
