Laser systems

The answer to your manufacturing needs
The perfect solution

Thousands of satisfied customers place their trust in machinery made by the world’s leading technologist in laser material processing. Laser systems from TRUMPF give you the security of knowing you have chosen a highly flexible and extremely productive solution for your processing needs. We will support you every step of the way, from developing your application to choosing the right technology, components, and software – and we even offer comprehensive after-sales services. Together we can boost your productivity.

Your industry partner: We want to share our expertise with you.

In good hands no matter what industry 4–7

In our Laser Application Centers, we work together with you to develop your process right from the very beginning.

We can help you rise to the challenge 8–9

TRUMPF delivers sophisticated complete solutions that have proven their mettle.

Everything from a single source 10–11

Diverse solutions for varied tasks: Together will we find the right one for your production line.

Your application, our technologies 12–13
Best conditions for a successful production.

**Condition Based Services**
14 – 15

Everything goes quickly with this software solution.

**Easy programming**
16 – 17

An overview of the intelligent functions of all machine series.

**Function overview**
18 – 19

Find out more about our product range here.

**The answer to your manufacturing needs**
20 – 41

Our comprehensive services and unwavering support will give you a competitive advantage.

**TruServices. Your Partner in Performance**
42 – 43

All the technical information you need at a glance.

**Technical data**
44 – 45
In good hands no matter what industry

What drives you drives us too. For many decades now, we have been offering customers from a wide range of industries help and advice on using laser technology. The knowledge we have acquired over this time gives us an edge that we aim to pass on to you: You can expect technology that is both state of the art and tailored to the specific needs and concerns of your industry. TRUMPF is always at the forefront of the latest trends, and is continually investing in the research and development of new technologies and potential applications to ensure we maintain this leading position in the future too.

Anywhere and everywhere

Laser material processing has been an integral part of numerous vehicle sub-assemblies for many years now. Almost every component – from the drivetrain through to custom decorations – has had a laser involved in its manufacture.

See the versatility that working with laser tools offers across all industries: www.trumpf.com/s/kecj9f
Automotive industry

Laser technology has been a part of contemporary car manufacture for many years now. The automotive industry is a global one – and TRUMPF is a global company: Customers around the world can rely on premium service, high spare parts availability, and an expert team of industry managers and product managers who are supported by sales staff with encyclopedic knowledge of products and industries. Our industry expertise has been acquired over decades and will take your production process to the next level.

Automobile body work
When working on car bodies, you always need very high speed and flexibility. With our laser systems, you can even process modern lightweight materials such as aluminum and hot-formed steel. With TRUMPF, you can bank on innovative, industry-adapted solutions for your welding, cutting, ablation, soldering and adhesive-preparation operations.

Electromobility
Use laser technology to turn your ideas for high-performance, compact components into reality. Or benefit from new joining geometries for conductive metals and the ultrafast welding of batteries and electrical components – with minimal spatter and heat input.

Lightweight design
Laser technology can open the door to modern-day lightweight construction, enabling you to process press-hardened and high-tensile steels, aluminum, fiber-reinforced materials, and hybrid material joins in a cost-effective way. Lasers even make it possible to use entirely new types of lightweight construction, such as intelligent structures or 3D-printed components, which will bring marked improvements to your product.

Powertrain
Working with drives often takes you to the limits of possible joining technology. To machine your drive components you need stable, spatter-free processes and deep, flawless seams that are long-lasting and can withstand harsh conditions. The laser technology from TRUMPF makes all of this possible.
Medical engineering

Nowhere is having reliable processes more important than in medical engineering: With TRUMPF you can count on ultraprecise, reproducible results without the need for reworking, plus highly flexible production from batch size 1. The laser light works contactlessly, meaning that sterility is assured at all times. Being marked with a laser ensures that parts are traceable in accordance with UDI standards, while 3D printing offers maximum customization of artificial hips or dentures.

Electrics/electronics

Fast processes in fully automated production lines, high-precision processing and minimal exposure to heat for your workpiece: Laser systems from TRUMPF make achieving these things effortless. A laser also enables you to engrave an extremely high number of sensitive electronic components at the same time – without contact and free from wear.

Sheet metal working

Sheet metal working requires speed and flexibility. TRUMPF laser systems enable you to quickly and easily carry out retooling, welding, cutting, and deposition welding with a single machine, while also offering fast processing, an intuitive operating concept and assistance with application development.
Utility vehicles and transportation

Modern laser machines are consistently reliable and bring down the cost per part, for example when doing welding jobs or the laser cutting of automotive body parts. Procedures such as laser metal deposition help to repair components cost-effectively instead of having to replace them. In this regard, TRUMPF is a dependable partner for automatable solutions.

Aviation and aerospace industries

From expensive certification processes and premium part quality to reliable reproducibility, the demands made in the aviation and aerospace industries are enormous. But with engineering from TRUMPF, you don’t have to worry about meeting them: we offer cutting-edge technologies such as laser deposition welding and 3D printing to the highest standards, and we are here to help you with a global service team.

Science

Are you conducting research into the properties of new or unusual materials? Or perhaps you’re developing processing strategies for the industrial production line of the future? Then you need state-of-the-art laser systems that are reliable and offer flexible parameterization. TRUMPF is helping numerous universities and institutes to acquire new knowledge.
We can help you rise to the challenge

Whether you know exactly what you need or you’re looking for a custom solution, we will be there for you every step of the way. We are fascinated by lasers and all the possibilities they offer. In our Laser Application Centers (LAC) we are ready and waiting to assist you – no matter when, no matter where. This is because we want you to find the right partner in the right place who always has the right technologies for your needs.

“With our tailor-made service packages, we are there at your side in the midst of your running operation. Our comprehensive remote services offer quick, uncomplicated help when errors occur – and, thanks to TRUMPF Condition Based Services, even before they occur. We also offer a broad spectrum of consulting with training courses, product enhancements and application services provided directly at your site.”

Benjamin Blocks dorf, Group Leader of Sales for Global Services, Ditzingen

“The industry management provides our customers with support long before they put the laser into operation. As early as the product development phase, our team of experts and key account managers provide step-by-step support for projects in industries like automotive and entertainment electronics. Working together with you, we develop tailor-made solutions to ensure you get the full potential of the laser technology in your production processes. In addition to current topics such as the electrification of vehicles or display technology applications, the further development and optimization of existing processes are very important to us.”

Marc Kirchhoff, Head of Branch and Global Key Account Management, Ditzingen
“TRUMPF helped us enter the market for 3D cutting high-strength steel grades. We received so many orders we soon had to purchase a second laser system.”

Gerardo Oaxaca, CEO of Superlaser & Fixtures, Puebla

“TRUMPF’s technical expertise helped us finally find an automatable laser cutting solution. It’s done away with the need for two out of three work steps. Plus we can react more quickly to design changes in manufacture.”

Ulrich Nieweg, Head of Prefabrication/Tool Making at Zwilling J. A. Henckels AG, Solingen

“The demands on productivity and production control are constantly increasing in industry. In order to set new standards, we develop software and service packages that can predict downtimes or maintenance missions of the equipment. We work closely with our customers to precisely align product development with customer benefit.”

Florian Kiefer, Head of Product Management Services, Ditzingen

Everything from a single source

TRUMPF gives you the security of knowing you have chosen a sophisticated and proven solution for your manufacturing system. Our numerous components – all of which we make ourselves – and our fully comprehensive global service make us a reliable partner for your production needs. You will also benefit from our knowledge of key issues for the future, such as Industry 4.0 and additive manufacturing.

Everything for your machine

- Machine
- Laser
- Procedure-specific processing optics
- Sensor technology
- Software
- Custom solutions

Everything for your manufacturing processes

- Automation solutions
- Construction of jigs and fixtures
- Part and powder management in additive manufacturing
- Laser network
Diode insurance
With the diode insurance, you make your production costs more predictable and calculate your operating costs optimally. Benefit from increased certainty and cost transparency for your TRUMPF laser systems.

Why choose TRUMPF laser systems?

1. Tailored solutions
2. Optimal for large-scale production and batch size
3. Consistently high component quality
4. Virtually warp-free processing
5. Highly precise results
6. No reworking needed
7. Maximum productivity minimizes cycle times
8. Process flexibility (cutting, welding, LMD)
9. Extremely robust and reliable
10. Maximum machine availability

TruServices. Your partner in performance
- Worldwide technical service
- Functional enhancements
- Monitoring and analysis
- Training
- Application advice

The best complete solution for your manufacturing process
We place extremely exacting demands on our products in terms of their technology, engineering, quality, and usability in practice. We guarantee you won’t fail to notice this.
Your application, our technologies

Our customers come from a wide variety of industries and they each have their own unique processing tasks, since every application places very specific demands on technology. TRUMPF offers laser systems that cater to all industrial applications, whether you work with rapid mass manufacture or batch size 1, from robust joining to fine separating: You will find the right solution for your manufacturing needs in our product range. You can obtain everything from a single source, from beam sources and system solutions through to beam guiding components, processing optics and intelligent sensor systems.
### Laser Systems Applications

* Upon request.
Would you like to sharpen your competitive edge? Digital networking offers numerous advantages: you see more, know more, and get the best out of your laser systems and your overall production. Condition Based Services already provide you with a full overview concerning the conditions of the beam source in your laser system. Additionally, TRUMPF Technical Service experts and algorithms support you in the timely detection and prevention of unplanned idle states.
Production status interface (OPC UA)

The production status interface (OPC UA) offers the opportunity for networking your machinery and preparing applications for Industry 4.0. With the OPC UA communication standard you can use machine data such as control variables, measured values, or parameters for individual applications.

Advantages of networking:
- Increase in productivity
- Increased availability through reduction of idle states
- Transparent overview concerning the statuses of your production
- Traceable process data

Uncover your production’s hidden potential: www.trumpf.com/d0w8vz
Easy programming

With TRUMPF software solutions, you can operate and program your laser machines in no time at all – easy to use and, being based on the entire TRUMPF know-how, with reliably good results. This is how you get the best results from your machine.

You can find further information here:
https://www.trumpf.com/filestorage/TRUMPF_Master/Products/Software/Brochures/TRUMPF-Software-EN.pdf
TruTops Cell Basic
Check and modify processing programs directly at the machine.

**Optimal process reliability thanks to visual feedback**
The program visually simulates the individual programmed processing steps. This way, you can quickly check if you will get the result you want. Every program change is immediately visible.

**Easy optimization of existing programs**
Besides the direct programming of the NC program, you can make direct changes with the intuitive graphic user interface of the machine control. This way you save a lot of time in the midst of ongoing operations.

TruTops Cell for 3D processing
Comprehensive solution for cutting and welding

**Offline programming**
The machine continues to run while you are already generating or adapting new NC programs at your computer. The processing program can predict possible collisions, automatically preventing them and optimizing processing trajectories. The modifications you make at the machine control are immediately adopted by TruTops Cell.

**Automatic optimization**
With just a few clicks, you can select the most suitable stored technology settings and use them to perfect your machining process. The entire TRUMPF know-how has flowed into the program, and it automatically prepares for you the right process parameters for your application.

**Integrated fixture module option**
With TruTops Cell, you can generate a CAD model of the suitable cutting fixture with just a couple of clicks. Clever additional functions then optimize it further.

**Compatible with all data formats**
TruTops Cell can be used with all current data formats. Being equipped for cutting, welding and laser metal deposition, the program also supports all TruLaser Cell machines.

TruTops Boost for efficient 2D laser cutting
Get even more out of your machine.

**Efficient machine utilization thanks to algorithms**
A common pool of orders and the Lean Nest nesting processor provide what you need for optimal material utilization. The software also shows you an overview of the statuses of your orders.

**Automatic part tracking**
Equip your production unit for Industry 4.0. With a great number of other optional functions, this program will open up whole new perspectives for modern production control.

**Automatic and interactive operation**
The intuitive operation of this software enables you to work with even greater productivity. The choice is yours as to whether you program interactively or leave it up to the automatic functions of the software.

* Basic.
TruLaser Cell 1100

The specialist in the laser welding of tubes, profiles and straps

01
Easy to integrate
thanks to a flexible, compact structure

02
Extremely efficient
thanks to state-of-the-art beam sources and calibrated sensors

03
Perfectly accessible
through variable adjustable axes

04
Fully customized
Optional extras offer solutions for every application
Easy to integrate
thanks to a flexible, compact structure

Make life easy for yourself: The compact and modular TruLaser Cell 1100 can be integrated into your production lines with the utmost ease. You can configure the beam guidance system to meet your specific needs in terms of the linear axes, the working height or process path. This makes it possible to weld in two different places at the same time.

Perfectly accessible
through variable adjustable axes

The variable setting axes offer ideal adjustment options, for both tubes and profiles. Thanks to its compact design, the variable beam guidance can be integrated into all current profile systems. The sophisticated beam forming feature enables top welding quality at maximum feed even with high requirements and the most diverse of seam geometries.

Non-stop manufacture – the system for endless welding professionals.

Equipment with the most modern process technology for demanding tasks.

Extremely efficient
thanks to state-of-the-art beam sources and calibrated sensors

With the TruLaser Cell 1100, you can step your production process up a gear. Simply choose the right beam source for your application – CO₂ laser or solid-state laser – and the system is highly flexible when it comes to positioning the beam and optics. The perfectly calibrated sensors guarantee optimum welding results. All of these factors together cut your operating costs and increase your production speed.

Use the beam source you need: The TruFlow CO₂ laser (left) or the TruDisk disk laser – the choice is yours.

Fully customized
Optional extras offer solutions for every application

Be more flexible thanks to a wide range of welding optics with linear or swivel axes. Sensor systems for finding and tracking seams together with functions such as SeamLine and SeamLine Pro guarantee maximum quality, reliability and productivity.

You too can achieve the perfect seam with the right process monitoring system.
TruLaser Cell 3000

The universal machine for the 2D and 3D laser welding, laser cutting and laser metal deposition of small to medium parts

01
Unique process flexibility
Welding, cutting, laser metal deposition

02
Highly productive processing
due to customized automation solutions and a dynamic axis system
Cost-efficient production
with top component quality

Reliable processing
due to intelligent image processing
and laser power sensor system

Spacious and most flexible work area
with compact machine design

You can find anything else you would like to know about the TruLaser Cell 3000 here:
www.trumpf.com/s/woxpy9
Unique process flexibility
Welding, cutting, laser metal deposition

Trend-setting flexibility without compromise. Having a broad variety of functions available, the machine can be equipped for every application. With the flexible optical interface, even scanner optics of the PFO series can be attached, for example, to weld e-mobility components. An interpolating rotation-swivel axis offers optimal 3D accessibility for laser metal deposition.

Highly productive processing
due to customized automation solutions and a dynamic axis system

High quantities? No problem. Using a rotary table for loading and unloading parallel to production, and a highly dynamic axis system with a linear drive, you will cut down your production times considerably. The automatic lateral lifting doors enable the system to be connected to a transfer system and loaded by robots. The ability to automate the TruLaser Cell 3000 makes it easy to integrate into complete production lines.
**Cost-efficient production**

with top component quality

When it comes to laser welding, BrightLine Weld sets new standards with regard to the welding speed and quality. Depending on the material concerned, it enables an increase in the feed rate of up to 300% or a reduction in energy consumption of up to 40% whilst ensuring the same welding depth. In combination with the highly precise axis system, this ensures the very best component quality at all times.

Without BrightLine Weld

With BrightLine Weld

With BrightLine Weld, materials such as mild steel, stainless steel, or even copper and aluminum can be welded virtually spatter-free.

**Reliable processing**

due to intelligent image processing and laser power sensor system

Powerful sensor systems ensure comprehensive process monitoring and fault-free machining processes. VisionLine image processing automatically detects the position of the component, forwards the information to the controls, and ensures that the weld seam is always positioned in the right place. CalibrationLine guarantees a constant laser power on the workpiece.

**Spacious and most flexible work area**

with compact machine design

More for your money: Boasting the largest and most flexible work area in its class, the TruLaser Cell 3000 not only offers space for large installations and comprehensive fixtures and automation systems. With an additional motor-driven workpiece axis, you can also process 3D components which are up to 50% larger.

The large work area can also be accessed from the side and enables large components to be processed in a minimal installation area.
TruLaser Cell 5030

The entry model for 2D as well as 3D laser cutting and welding of large parts

01
Low-cost introduction to 3D laser cutting and welding

02
Top operator convenience due to intuitive software support
Dynamic and precise with flying optics

Top quality due to unique features

Process flexibility for cutting and welding with 2-in-1 LLK

More information about the TruLaser Cell 5030 can be found here: www.trumpf.com/s/j5ra70
Low-cost introduction
to 3D laser cutting and welding

Cost-efficient processing starting with the very first part: Compared to hybrid and sheet mover machines with CO$_2$ lasers, the TruLaser Cell 5030 achieves up to 300% higher performance with a machine-hour rate reduction of up to 20%. Its clever design reduces the installation area of the system to a minimum.

Dynamic and precise
with flying optics

With X-Blast Technology you work at a greater distance to the sheet metal. This reduces nozzle collisions and increases the quality of the 3D cutting edges. Flying optics also contribute to precise results. Nevertheless, in the event of a collision, the magnetic coupling prevents damage to the machine.

Top operator convenience
due to intuitive software support

The TruLaser Cell 5030 is optimal for the processing of frequently changing orders with small lot sizes. The running-in of new parts is supported by clever features like, for example, the stored technology parameters for all currently used materials, the TruTops Cell Basic program for quick program modifications or the automatic focus setting. The front doors of the machine are made of light CFRP material, enabling quick and convenient access to the work area.

Top quality
due to unique features

Optimal coordination between laser, machine, and software forms the foundation for excellent processing quality. With the TruLaser Cell 5030 you have all three building blocks from TRUMPF. Machine operators are supported by the latest functions such as Smart Optics Setup, for a quick and convenient setup. The precision of the machine can be automatically tested during the production process with ObserveLine Professional. This reduces the production of faulty parts to a minimum. The BrightLine Weld option enables laser welding almost free of spatter and optimal weld seam quality. At the same time, significantly higher feed rates can be achieved with this option, and energy costs can be reduced.
Process flexibility for cutting and welding
with 2-in-1 LLK

The 2-in-1 LLK solution for solid-state lasers enables the use of the same optical cable for both welding and cutting operations. When switching between the two methods, only the processing optics has to be changed, the system control then adjusts the laser beam automatically. And you will also be impressed by the easy operation and top processing results. The standard work table used in all applications is also available as a moveable table. Special 3D work tables are also available as an alternative.

The same optical setup and working principle used with the high-end 3D machines make top processing speeds possible.

The manually adjustable focus position enables you to perform both deep penetration and heat conduction welding with the same processing optics.

300% higher productivity, efficient solid-state laser and compact design – the TruLaser Cell 5030 offers great benefits compared to hybrid machines with a CO₂ laser.
TruLaser Cell 7040

The perfectionist when it comes to 2D and 3D laser cutting and laser welding as well as laser metal deposition of large parts.

01

Unique flexibility
in 3D processing with solid-state or CO₂ lasers

02

Top productivity
with frequently changing series and lot sizes
Top process reliability and quality
thanks to X-Blast Technology, low-spatter welding and intelligent image processing

Perfectly ergonomic
with the movable control panel and evenly illuminated work area

Quick part setup
using teach panel, MobileControl App and TruTops Cell Basic

More information about the TruLaser Cell 7040 can be found here: www.trumpf.com/s/weothn
**Unique flexibility**
in 3D processing with solid-state or CO₂ lasers

The TruLaser Cell 7040 was specially developed for a flexible production environment. You can switch between 3D cutting and welding as well as laser metal deposition. The 2-in-1 LLK also automatically adjusts the laser beam optimally to suit the respective processing task. This means you are always perfectly equipped.

---

**Top productivity**
with frequently changing series and lot sizes

High positioning speeds and axis dynamics allow for low production times. On-the-fly piercing with FastLine Cell reduces your nonproductive times by up to 40% when cutting. The front doors made of light GFRP material cut your time opening and closing doors by 35%. And you save even more time with loading and unloading parallel to production in 2-station operation and with an extremely fast rotary table which revolves the part into the work area in only 4 s. You manufacture more profitably than ever before, and that with absolute reliability.
**03**

**Top process reliability and quality**

thanks to X-Blast Technology, low-spatter welding and intelligent image processing

The X-Blast nozzle technology ensures consistently good 3D cutting quality due to the greater nozzle-sheet distance. The ObserveLine sensor system inspects the cut contour at lightning speed. With the low-spatter welding provided by BrightLine Weld, outstanding weld seam quality and at the same time a tripling of the feed rate is achieved. Using the image processing feature VisionLine, you are always sure that the weld seam is placed at the right position. This noticeably increases the quality of your components, and saves time and money.

**04**

**Perfectly ergonomic**

with the movable control panel and evenly illuminated work area

The ergonomic control panel can be moved along the entire machine, ensuring a perfect view of the work area from every angle. The bright and optimally illuminated work area guarantees constant comfort while working. The Smart Optics Setup station also ensures that setting the optics is quick and reliable.

**05**

**Quick part setup**

using teach panel, MobileControl App and TruTops Cell Basic

The compact teach panel with 6D mouse makes it easier to run in, teach and traverse the axes. With the TruTops Cell Basic software, the programs can be adapted directly at the machine – without making changes to the offline programming system. In addition, the control automatically detects which optics are installed, allowing for a quick and error-proof change of optics.
TruLaser Cell 8030

The expert in the 3D laser cutting of hot-formed parts

01
Top productivity
in series production

02
More efficient production
thanks to the economical TruDisk 2000

03
Clever functions
for high processing dynamics and safety

04
Save space
due to the compact installation area
You can find out even more about the TruLaser Cell 8030 here: www.trumpf.com/uv1ld5

Large components
processed efficiently

Stable cutting process
with the X-Blast nozzle
Top productivity
in series production

You process at maximum productivity with the TruLaser Cell 8030. Part times are reduced up to 7% using dynamic level 3. The numerous functions like, for example, the optimized rotary table, provide process reliability and shortened nonproductive times. The 20% reduced rotation time of 1.8 s is the fastest on the market. Intelligent automation solutions ensure that there are no bottlenecks, even with manual loading and unloading. You can optimize cycle times and achieve greater productivity using a rotary indexing table or a robot for part automation. With ObserveLine Comfort, the improved slug check is 4 times as fast as the competition.

A rotary indexing table and robots keep cycle times to a minimum.

Energy consumption

Save over 15%

You also save on power input with TRUMPF solid-state lasers.

Clever functions
for high processing dynamics and safety

Two optical measuring processes ensure greater reliability on the TruLaser Cell 8030: ObserveLine Comfort checks with lightning speed whether a contour has been fully cut out, thereby preventing cutting the cut-out scrap from remaining in the finished part. ObserveLine Professional monitors the positioning accuracy of the machine and can detect even the tiniest of positioning errors of the optics. The precise and secure magnetic coupling enables you to carry on working in no time at all, even in the event of a collision. With assistants like these, you save money by producing faster and reducing rejects.

The ObserveLine Comfort measuring system ensures that every cutout is indeed cut out and gone.

The ObserveLine Professional measuring system monitors the correct positioning of the optics.
**Save space**

due to the compact installation area

Lacking space in your production facility? No problem! The compact TruLaser Cell 8030 has a very small footprint, meaning you have the flexibility to plan multiple machines into your workspace according to your specific needs. A further advantage of the system is that it is ergonomic and extremely easy to use. The rotating changer can be loaded and unloaded from the front as well as the sides.

---

**Large components**

processed efficiently

Produce large parts with top productivity. The working area of the TruLaser Cell 8030 can be extended as desired. With this concept, you can process door rings or other large hot-formed parts efficiently and completely.

---

**Stable cutting process**

with the X-Blast nozzle

The optimized cutting nozzle processes at a greater clearance from the sheet – this reduces downtimes caused by nozzle collisions by 90%. Profit not just from the greater machine availability, but also from a 10% drop in nozzle wear and from optimal cutting edges, especially when tackling highly demanding 3D geometries.
TruLaser Station 7000

The compact solution for the 3D laser welding of small parts

01
Spacious work area on a minimized footprint
offering room even for larger components

02
Profitable laser welding
thanks to the best price-performance ratio of its class

03
Constant high part quality
with fully integrated image processing
Ideal for large quantities  
because of the rotary table

High processing flexibility  
guarantees a variety of welding applications

Optimal for complex welding geometries  
thanks to its highly developed 3D processing technology

You can find more information about the TruLaser Station 7000 here:  
www.trumpf.com/s/trulaser-station-7000
**Spacious work area on a minimized footprint**  
offering room even for larger components

The TruLaser Station 7000 offers the perfect balance between work area and footprint. A broad spectrum of parts can be processed in the generously designed work area of the machine – including larger parts and even complex fixtures. The exhaust system is integrated in the machine.

---

**Profitable laser welding**  
thanks to the best price-performance ratio of its class

The modular design of the TruLaser Station 7000 will keep your investment costs down. This modern machine concept is perfectly designed for welding assemblies such as sensor systems, rotationally symmetrical parts and medical instruments. You will also be impressed by the low cost per part.

---

**Constant high part quality**  
with fully integrated image processing

The integrated image processing feature detects component geometries. This means that you always weld at the right point and save time and money as you produce with unchanging high quality. The intuitive user interface takes the operator quickly through the individual work steps on the spacious touchscreen.
Ideal for large quantities
because of the rotary table

The TruLaser Station 7000 can be optimally equipped with a rotary table. This enables loading and unloading parallel to production, even when automated with a robot. High-power lasers of the latest generation enable optimal processing times, making the machine perfectly suited for highly productive series production.

High processing flexibility guarantees a variety of welding applications

Weld very diverse seam geometries at a constantly high level of quality. No matter whether you are using heat conduction or deep penetration welding, whether it’s with thin or thick sheet – the TruLaser Station 7000 offers high performance. You can choose between swiveling welding optics and scanner optics and select among a wide variety of beam sources.

Optimal for complex welding geometries thanks to its highly developed 3D processing technology

With up to 5 interpolating axes you can handle complex 3D components and seam geometries without any problem. The corresponding fixture equipment can be accommodated in the spacious working area and can be programmed using a traveling operator interface.

Whether you want to weld electrical contacts for control units, medical instruments or ultrasonic sensors – the TruLaser Station 7000 can be adapted to your requirements.

3D laser welding in the medical technology field.
TruServices. Your Partner in Performance

For a successful future, rely on services which will carry you forward in the long term, and use them to create the best conditions for the success of your production. We create opportunities together, so that you can use your TRUMPF laser systems optimally at all times and adjust to changes with flexibility. In us you will find a reliable partner who supports you with tailor-made solutions and service packages – so that you can produce economically and at a consistently high level, thus optimizing your value creation sustainably.

**EMPOWER**
If you wish to create the best conditions for successful manufacturing: We will support you in this.

**SUPPORT**
If flexibility and availability of equipment in day-to-day operations are essential to you: We are there for you.

**IMPROVE**
If you want to gradually focus your manufacturing on maximum value creation: We will work together to reach your goal.
Select the right scope of services for you with predictable costs – technical hotline, remote support, on-schedule maintenance, repairs including spare parts. You benefit from inexpensive package prices and lower processing outlay.

Our global service network helps you with quick, technical support, and preventively ensures the availability of your TRUMPF system. We support you from installation to maintenance all the way to system repairs. Customer service specialists advise you on which solution is the most efficient in your case – in-person support on-site or problem-solving via remote support.

With our help you’ll be well on your way to finding your production’s hidden potential. For example, analyzing the design of your parts, your subprocesses, or your entire production. The results give us the data we need to help you develop selective or holistic solutions, for example for networked production.

Produce with as much reliability and precision as possible – genuine TRUMPF spare parts and consumables are ideally suited for your system, and meet top quality requirements. Our global logistics network ensures that you receive the required parts as quickly as possible.

The passion that drives us

From production and manufacturing technology to laser systems and material processing, we develop highly innovative products and services to meet your needs. Our solutions are superbly reliable and ready for industrial use. We do everything we can to give you a powerful competitive edge, drawing on our expertise, experience, and a genuine passion for what we do.

Industry 4.0 – solutions for your future

The fourth industrial revolution is changing the world of manufacturing. Is it possible to stay competitive internationally with all this change? Yes – with the opportunities offered by digital networking. With our pragmatic solutions, we will support you every step of the way on your networked manufacturing journey, helping you make your processes more transparent, more flexible and, first and foremost, more cost-effective. This will enable you to make the most of your resources and ensure your production process is fit for the future.

TruConnect is synonymous with Industry 4.0 at TRUMPF. The range of solutions connects man and machine through information while covering all steps of the production process – from quotation through to shipping your parts.
Machine tools for flexible sheet metal and pipe work

From laser cutting and punching to bending and laser welding, we provide our customers with tailor-made machines and automation solutions for a versatile array of sheet machining processes. That includes advice, software, and services – in short, everything you need to achieve reliable production of high-quality products.
TRUMPF is certified to ISO 9001
