

Equipment Manager Punch

Setting up die-cutting tools made easy

Would you like to set up your punching and laser-punching machines safely, easily, and efficiently?

Then Equipment Manager Punch is just what you need. Manage your tools and tool data clearly and efficiently with Equipment Manager Punch. With digital data flow and inventory management, this solution supports your setup process and paves the way for your transition to the smart factory.

The Equipment Manager Punch simplifies your setup process by offering the following benefits

Save time on searching

Thanks to transparent inventory and warehouse management, you know the exact location and condition of your tools.

Transfer data automatically

Tool data is automatically saved and transferred - this saves time and prevents errors.

Avoid preparation mistakes

The integration of QuickSet with its scanning function and Equipment Manager Punch enables automated data maintenance, thereby minimizing sources of error.

Take pressure off specialized staff

Accurately assess the condition of wear and tear based on precise usage history, rather than relying on estimates based on experience.

How does TRUMPF's Equipment Manager Punch work?

The setup process is digitally supported - from retrieving individual parts to mounting them on the machine. The warehouse and inventory management system automatically suggests suitable components for assembly. In QuickSet, they are assembled, precisely measured, and registered via scan.

The captured measurement data is reliably assigned to the complete tool and transmitted to the machine. The Equipment Manager Punch is fully compatible with the latest TruPunch and TruMatic machines, enabling seamless integration into your production environment.

The packages - from a simple start to full integration into existing production

Equipment Manager Punch Starter Package

Enables a quick start with digital tool management for new TruPunch and TruMatic machines.

- Digital transfer of tool data to the machine
- Tool registration via scan directly at the machine
