

Machines and systems

# Industry 4.0 Starter Package

## Your advantages at a glance

**Increased productivity**  
Increase your output by analyzing your downtimes.

**Transparency**  
You get the relevant data of your machine at a glance.

**Increase of availability**  
Reduce your machine downtimes with proactive analyses and monitoring.

## Industry 4.0 Starter Package

This data-based service package increases your productivity through the increased transparency and availability of your lasers and machines. Independently derive optimization measures and use Condition Monitoring to benefit from the monitoring and analysis of sensor data by algorithms and by TRUMPF service experts. This is because potential problems can be recognized quickly or before they occur. Device information, conditions and production performance are visualized in clear reports. With the Industry 4.0 Starter Package you benefit from the proactive service missions of our service experts.

### Production Report (provided daily)

Machine utilization transparency

- Graphical presentation of your program runs and operating status
- Downtimes and their causes at a glance
- Identification of optimization potential

### Condition Monitoring

Monitoring of the laser and machine statuses by TRUMPF

- Algorithm-based data analyses by experts
- Proactive contact by experts
- Resulting reduction in machine downtimes
- Optimized planning of service missions

### Including Condition Report (provided weekly)

- Detailed overview of the condition of all the machine components
- Long-term improvement: Recommendations for independent optimization measures

**Now available for the TruLaser Cell Series!**

TruLaser Cell 3000/5030/7040/8030

The Industry 4.0 starter package is not available for every machine serial release. Please check compatibility with your sales contact before ordering.
